## Combined Heat and Power (CHP) Energy Centre

### Where will the CHP energy centre be located?

The CHP energy centre will be located adjacent to the Manchester Central conference centre at the intersection of Great Bridgewater Street and Lower Mosley Street, beneath the railway viaduct which carries the Metro-link service. The location of the proposed CHP energy centre has been determined following careful site evaluation. Critically, it is within close proximity to the buildings that will be served by the network.

Location of the proposed CHP energy centre

### What will the energy centre look like?

The building has been designed by award-winning architects Tonkin Liu together with leading engineers Arup.

The facade fronting Lower Mosley Street will be finished with white brick, chosen to symbolise the clean energy produced by the project. The top of the facade will be illuminated from within, the lighting will be sequenced and programmed to glow in tandem with the Tower of Light.
